GENERAL INFORMATION REGARDING THE INDUSTRY AND THE POSSIBILITIES OF DEVELOPMENT.

The Minzira Forest is being exploited by the Government.

The Tanganyika portion (approximately 60 square miles) (South Buddu) of Minzira Forest having been leased to the Uganda Government for a period of 10 years, lumbering operations will be carried out on a considerably larger scale as more machinery and plant are available. The saw mill is situated on Busungwe Island.

Work is done on a smaller scale in Budongo Forest (Bunyoro, Northern Province) with hand saws.

Private companies have saw mills in the Nabugulo Forest and Mabira Forest in Buganda and at Iganga in Busoga. A syndicate has commenced operations on the Eastern and Northern slopes of Mount Elgon.

The bulk of timber is utilised locally—the possibilities of development and exploitation, especially of mvule in Busoga, are considerable, but more machinery and improved means of transport are required.

(a) Apart from Limestone, which is quarried by the P. W. D. at Tororo for the purposes of lime-making, there is at present no mining or quarrying of any kind done in this country, with the exception of clay-digging for the manufacture of bricks (a small industry in the hands of Indians and Europeans) and surfacing or very shallow mining by natives for iron ores used in the manufacture of their tools and weapons. For the last two industries no returns are available; the quantity of limestone quarried in 1921 was approximately 20,265 pounds.

(b) The area of the Protectorate subjected to preliminary Geological Survey during the year under review was approximately 3,000 square miles, of which 800 square miles were surveyed in detail. Indications of several valuable mineral substances have been discovered, but at the moment iron (Hæmatite, Magnetite and Limonite) is the only mineral—apart from materials for building purposes such as stones, murrum, etc.—which is certainly known to exist in great quantity.

FOR CALCULATION OF TIME.....37° 30' E. OF GREENWICH.

HOURS FAST OF GREENWICH MEAN TIME..... 2 HOURS 30 MINUTES.

THE WEATHER OF 1921.

Rainfall.

The outstanding feature of the weather was the low rainfall which prevailed generally throughout the Protectorate. In practically all districts the rains were below normal, in some districts considerably so.

The spring rains were late in commencing, particularly in the Eastern Province, where a famine was feared owing to the partial failure of native food crops, consequent to the dry conditions.

The following table shows the deviations from the averages of the last 10 years at 20 stations representative of the whole Protectorate:—

Station.	Province.	Deviation.	Station.	Province.	Deviation.
		Inches.			Inches.

The highest rainfall recorded was 61·79 inches at Hoima River Estate, Northern Province, and the lowest 17·94 inches at Butiaba, Northern Province.

Temperature.

The temperatures were practically normal. The deviations from the averages of the last 10 years for the following eight principal stations being:—

Station.	Province.	Max.	Min.	Station.	Province.	Max.	Min.
		°	°			°	°

The highest monthly mean temperature recorded was 94·8° for the month of March, at Serere, Eastern Province. The lowest monthly mean temperature was 53·5°, recorded for September at Fort Portal, Western Province.

The following table shows the months characterised by extremes of temperature and moisture in each Province:—
